

## Cognitive Processing Therapy Workshop Training Description

---

**Target Audience:** Mental health providers who treat military personnel and veterans with PTSD.

**Instructional Level:** Introductory

**Course Description:** The STRONG STAR Training Initiative offers a two-day workshop in Cognitive Processing Therapy (CPT). CPT is a 12-session cognitive behavioral treatment for PTSD that can be personalized to include fewer or additional sessions. CPT teaches patients to recognize and challenge dysfunctional cognitions about their traumatic experiences and current beliefs about themselves and others. Through CPT, patients learn about symptoms of PTSD and the connection between trauma-based thoughts and feelings. CPT clinicians engage patients to recognize and challenge unrealistic thoughts, referred to as “stuck points,” throughout the course of treatment.

### **Learning Objectives:**

At the end of this course, participants will be able to:

1. Describe PTSD symptoms and theory underlying CPT
2. Understand and identify pre-treatment issues
3. Use knowledge of assessment and outcome measures
4. Demonstrate knowledge and skills required to implement CPT

**Primary Goal:** After completion of this training, mental health providers will be able to effectively implement CPT.

**Date and Time:** Wednesday and Thursday, June 29-30, 2022 from 9 a.m. to 5:00 p.m. CST.

**Duration:** 2-day workshop

**Where:** Zoom

**Training Cost:** \$300 for eligible providers
